Passage II

New situations always make me a bit nervous, and my first swimming class was no exception. After I changed into my bathing suit in the locker room, I stood **timidly** by the side of the pool waiting for the teacher and the other students to show up. After a couple of minutes the teacher came over. She smiled and introduced herself, and two more students joined us. Although they were both older than me, they didn't seem to be embarrassed about not knowing how to swim. I began to feel more at ease.

We got into the pool, and teacher had us put on brightly colored water wings to help us stay afloat. One of the other students, May, had already taken the beginning class once before, so she took a kickboard and went splashing off by herself. The other student, Jerry, and I were told to hold on to the side of the pool and shown how to kick for the breaststroke. One by one, the teacher had us hold on to a kickboard while she pulled it through the water, and we kicked.

Section One: Reading Passage I**Factors that Lead to Success in College**

1. The road to success in college is full of obstacles that might interfere with students reaching their goals. Despite these obstacles, students can achieve their dream of earning their degree. They need support from family and friends, strong motivation, and the ability to focus.

SUBJECT CODE 01

BOOKLET CODE: 057

- 2 To begin with, college students need the support of their families to succeed. If they are lucky, they have families that protect and nurture them. Their family members act as helping hands, and friends who they can depend on emotionally. Students need this support system to help them realize their own capacity even when they doubt themselves. For example, because the work load is too great or the exams are too hard, students may get discouraged. Families can encourage them to persevere. In addition, tuition and books are very expensive; consequently, some students are forced to work. If they receive financial assistance from their families, they can dedicate all their time to their studies.
- 3 Students need to keep up the motivation they need to study. Students have many obligations to fulfill, such as completing homework assignments and research projects, studying for exams, and writing term papers. Many students work after school and arrive home late at night. Only dedicated and responsible students will push themselves to finish their work before going to bed. When the options are to go to a party with friends or stay home and work, only determined students will choose to study.
- 4 Students also need to focus on realistic academic goals. Many students are not aware of the importance of selecting the right college and major. In fact, a wrong decision may result in a waste of time and money. For example, students may have very high expectations and select a major that presents demands they cannot meet. In some cases, they find themselves on a career path they don't even enjoy. As a result, they may have to change their major or drop out of college when they realize that they cannot keep up their grades. If they are more focused on what they want, the better their chances will be to achieve their goals.
- 5 If students are enthusiastic about what they are studying, realistic about their academic goals, and receive support from their families, their college journey will be easier.

Section Two: Reading Passage II

Breaking the Rules

- 1 College and high school students often look for shortcuts to make their work easier. To achieve a good grade, students are sometimes tempted to cheat. One of the most frequent ways of cheating is to buy essays from the Internet. **This** may result in a good grade. However, plagiarism (copying someone else's work and pretending it is yours) is irresponsible from a social and an academic standpoint.
- 2 First, plagiarism is socially unacceptable. Students are expected by teachers and their classmates to do **their** own work. If a student plagiarizes, he or she violates that trust. This may damage the relationship between the student and the teacher, as well as the relationship with classmates.
- 3 Plagiarism is also wrong because it is against academic policy. Even though buying essays and presenting them as your own may save time initially, **this** is against university rules. In fact, universities have ways to prove if students have plagiarized. Instructors can use software that compares a student essay and material on the Internet. This way, instructors can detect if a particular essay was copied. The consequences are very serious.
- 4 It is true that many students at colleges have busy schedules and may have trouble completing their assignments on time. Some students may argue that because of their situation, they sometimes have no choice but to buy essays from the Internet. However, this should never be the solution. Instead, students might try to negotiate with their instructor on the deadline. Furthermore, while writing may be a struggle for some students who feel that their writing is not good enough to receive an A, it is crucial that they do their own work. They may go to a writing center for help. Otherwise, if they plagiarize, they will not develop their own writing and critical thinking

skills. As a result, they may not be prepared to pass their final exams. In the end, plagiarizing is harmful to a student's own academic success.

- 5 I believe that university authorities should discourage plagiarism by making students more aware of the problems it causes. It damages classroom relationships, violates school policies, and prevents students from realizing their own potential. If we don't stop it, many students will lose out on their education.
